

## Deliverables for Part 1

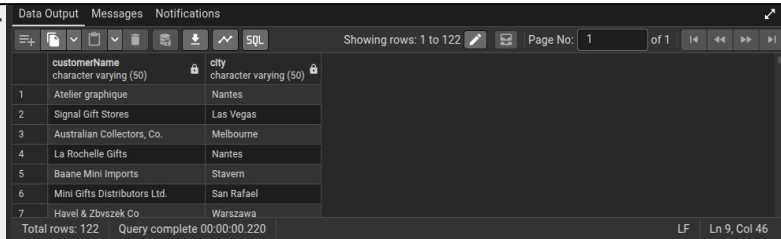

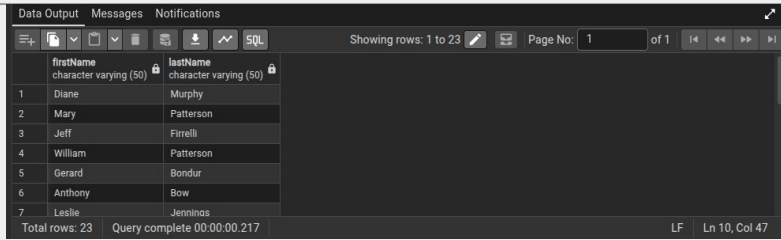

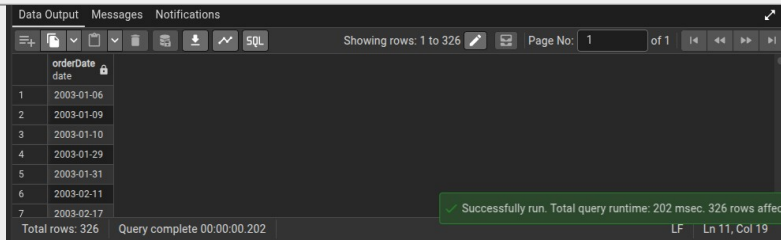

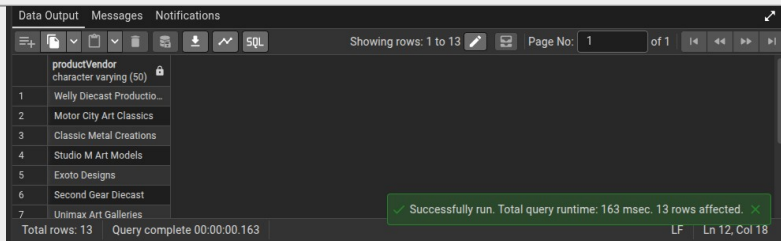

The answers for task 1 part 1 for week 3 is shown in the table below:

| S.N. | Natural Language Question | SQL Query                | Explanation                                                                                 | Snippet                                                                               |
|------|---------------------------|--------------------------|---------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 1    | List all products         | SELECT * FROM products;  | Retrieves every column and record from the products table to provide a full inventory list. |    |
| 2    | Get all customers         | SELECT * FROM customers; | Selects all data points for every customer registered in the customers table.               |    |
| 3    | Show all orders           | SELECT * FROM orders;    | Fetches all records from the orders table, showing order IDs, dates, and statuses.          |   |
| 4    | List all employees        | SELECT * FROM employees; | Retrieves the full profile for every staff member from the employees table.                 |  |

| S.N. | Natural Language Question    | SQL Query                                       | Explanation                                                                                 | Snippet                                                                               |
|------|------------------------------|-------------------------------------------------|---------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 5    | Get all offices              | SELECT * FROM offices;                          | Selects all information regarding physical office locations from the offices table.         |    |
| 6    | Show all product lines       | SELECT * FROM productlines;                     | Returns the categories and descriptions available in the productlines table.                |    |
| 7    | List all payments            | SELECT * FROM payments;                         | Provides a complete history of all financial transactions recorded in the payments table.   |   |
| 8    | Get product names and prices | SELECT "productName", "buyPrice" FROM products; | Projects specific columns (productName, buyPrice) from the products table for a price list. |  |

| S.N. | Natural Language Question          | SQL Query                                      | Explanation                                                                                        | Snippet                                                                               |
|------|------------------------------------|------------------------------------------------|----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 9    | Get customer names and cities      | SELECT "customerName", "city" FROM customers;  | Retrieves the company name and their physical city location from the customers table.              |    |
| 10   | List employee first and last names | SELECT "firstName", "lastName" FROM employees; | Selects only the name components of staff to create a simple directory from the employees table.   |    |
| 11   | Get all order dates                | SELECT "orderDate" FROM orders;                | Fetches the orderDate column from the orders table to analyze chronological activity.              |   |
| 12   | Show product vendor list           | SELECT DISTINCT "productVendor" FROM products; | Uses the DISTINCT keyword on the productVendor column to list unique suppliers without duplicates. |  |

| 17   | List all job titles        | SELECT DISTINCT "jobTitle" FROM employees;   | Provides a unique list of all professional roles held by staff using DISTINCT on jobTitle. |  <p>The screenshot shows the results of a SQL query in a dark-themed IDE. The query is 'SELECT DISTINCT jobTitle FROM employees;'. The results are displayed in a table with 7 rows: 1. VP Sales, 2. Sales Manager (APAC), 3. Sales Manager (EMEA), 4. VP Marketing, 5. Sales Rep, 6. Sales Manager (NA), and 7. President. A green status bar at the bottom indicates 'Successfully run. Total query runtime: 232 msec. 7 rows affected.'</p>                                                                                                                                                        |
| 18   | Get customer phone numbers | SELECT "customerName", phone FROM customers; | Selects contact names and their corresponding phone numbers from the customers table.      |  <p>The screenshot shows the results of a SQL query in a dark-themed IDE. The query is 'SELECT customerName, phone FROM customers;'. The results are displayed in a table with 7 rows: 1. Atelier graphique (40.32.2555), 2. Signal Gift Stores (7025551838), 3. Australian Collectors, Co. (03 9520 4555), 4. La Rochelle Gifts (40.67.8555), 5. Baane Mini Imports (07-98 9555), 6. Mini Gifts Distributors Ltd. (4155551450), and 7. Havel &amp; Zbyszek Co. ((26) 642-7555). A green status bar at the bottom indicates 'Successfully run. Total query runtime: 220 msec. 122 rows affected.'</p> |
| 19   | Show product MSRP values   | SELECT "productName", "MSRP" FROM products;  | Retrieves the name and Manufacturer's Suggested Retail Price for all inventory items.      |  <p>The screenshot shows the results of a SQL query in a dark-themed IDE. The query is 'SELECT productName, MSRP FROM products;'. The results are displayed in a table with 7 rows: 1. 1969 Harley Davidson Ultimate Chopper (95.70), 2. 1952 Alpine Renault 1300 (214.30), 3. 1996 Moto Guzzi 1100i (118.94), 4. 2003 Harley-Davidson Eagle Drag Bike (193.66), 5. 1972 Alfa Romeo GTA (136.00), 6. 1962 Lancia Delta 16V (147.74), and 7. 1968 Ford Mustang (194.57). A green status bar at the bottom indicates 'Successfully run. Total query runtime: 227 msec. 110 rows affected.'</p>         |
| 20   | List order numbers         | SELECT "orderNumber" FROM orders;            | Fetches the unique identification numbers for every order placed.                          |  <p>The screenshot shows the results of a SQL query in a dark-themed IDE. The query is 'SELECT orderNumber FROM orders;'. The results are displayed in a table with 7 rows: 1. 10100, 2. 10101, 3. 10102, 4. 10103, 5. 10104, 6. 10105, and 7. 10106. A green status bar at the bottom indicates 'Successfully run. Total query runtime: 242 msec. 326 rows affected.'</p>                                                                                                                                                                                                                          |
